

## **Electronic Tolls Coming to Atlantic Avenue/Fl. Tpk. Interchange!**

This project is called an All Electronic Tolling conversion or AET. Construction is scheduled to begin late this Summer and is expected to last until the middle to end of 2021. The project # is 429339-4.

On May 14, 2019 the “letting” process will start which is when the FDOT advertises and awards construction contracts to build a project.

Currently, the project timeline calls for the complete conversion to electronic tolls to happen late summer, 2020.

To understand how the electronic toll system works, go to [floridasturnpike.com](http://floridasturnpike.com) and click on the ‘all electronic tolling’ link at the top of the page.

If the driver does not have a SunPass, the driver will receive a bill in the mail for the price of the toll as well as a service charge. Florida’s Turnpike Enterprise always reminds drivers that SunPass customers enjoy the lowest toll rate and avoid any service fee associated with the Toll By Plate System.

SunPass is NOT currently interoperable with EZ Pass, however there are efforts on both sides to make that happen in the Future. SunPass is currently interoperable with Georgia and North Carolina with other states expected to join as well.
