Stormwater Management In Your Community

HAPPY HALLOWEEN

October 2019

It's Not Over...

Halloween is not the only scary thing in October. In Florida, at least nine hurricanes of Category 3 or greater have made landfall in the month of October. Most of us can remember Hurricanes Wilma in 2005 and Opal in 1995. It's important to be storm ready all year but especially during the Hurricane Season from June 1 to November 30. Visit www.ready.gov for tips and helpful information.

Canals Are Not Dump Sites

Disposing of landscape debris or other

trash in LWDD's canals or along the rights-of-way is illegal. Dumping offenders most often include residents, landscape contractors and waste removers. Read more about the negative effects of illegal dumping and what you can do to prevent it.

Canals Are Not Dump Sites

Is It a Lake Or Pond?

Stormwater management ponds are often mistaken for lakes, but they are very different. Lakes are naturally formed waterbodies whereas stormwater ponds are man-made and have a distinctive and important role in managing surface water quality and quantity. Continue reading and find out why your community lake is really a stormwater management pond.
