

Explanation of the Flashing Yellow Signal on 441

The southbound left turn in will remain flashing for some time. It will go red when the left out of Seven Bridges and Boca Bridges gets the green turning movement. All other times it will be yellow flashing.

The southbound left in on SR7 did not meet warrants to have a green/yellow/red stop situation. FDOT will not authorize the signal go fully operational until the left in warrants that....which will not happen anytime soon. They wanted to have free flow on SR7. A fully operational left in will stop that free flow.

So, the purpose of yellow flashing is to let drivers know that they have to yield to northbound straight on SR7. As noted above, it will go red when folks exiting Boca Bridges and Seven Bridges are making the left out onto SR7.
