

A New Way To Treat Carotid Artery Disease

TransCarotid Artery Revascularization (TCAR)

*Helps Prevent Stroke
Less Risk
Less Invasive*

Carotid artery disease is a form of atherosclerosis, or a buildup of plaque, in the two main arteries in the neck that supply oxygen-rich blood to the brain. If left untreated, carotid artery disease can often lead to stroke.

Working on the forefront of technology and advancement within the medical industry,

Delray Medical Center is the first hospital in South Florida to treat carotid artery disease through the use of TransCarotid Artery Revascularization (TCAR) and is recognized by Silk Road Medical as South Florida's only TCAR Center of Excellence.

TCAR is a new, less-invasive treatment option used to repair clogged carotid arteries, reducing the risk of stroke. Well-suited for those patients at higher risk of complications from carotid surgery due to age, anatomy, or other medical conditions, it holds low stroke risk and faster patient recovery.
