LAKE WORTH DRAINAGE DISTRICT

NEWS

Reflections - September 2023

[Visit our STORM RESPONSE Website](#)

Flooding and Septic Systems

During a flood or period of severe wet weather, wastewater (sewage) from your septic system can back up into your house because the water is unable to drain from the septic tank to the drain field due to saturated soil conditions. Learn more about flood effects on septic systems at the link below.

Post Storm Debris Removal

After a major storm event, debris clean-up is paramount to getting back to normal. But depending on the severity of the storm damage it may take several weeks before LWDD crews can address all incidents. Download our flyer on what you can expect after the storm, and please share it with your neighbors.

What's Wrong With This Picture?

Family pools are not the only culprit. Canals, ponds and fountains are just a few of the many water hazards young children encounter. Taking steps to safeguard children from drowning is critical. Find out how you can prevent drowning at the link below.
